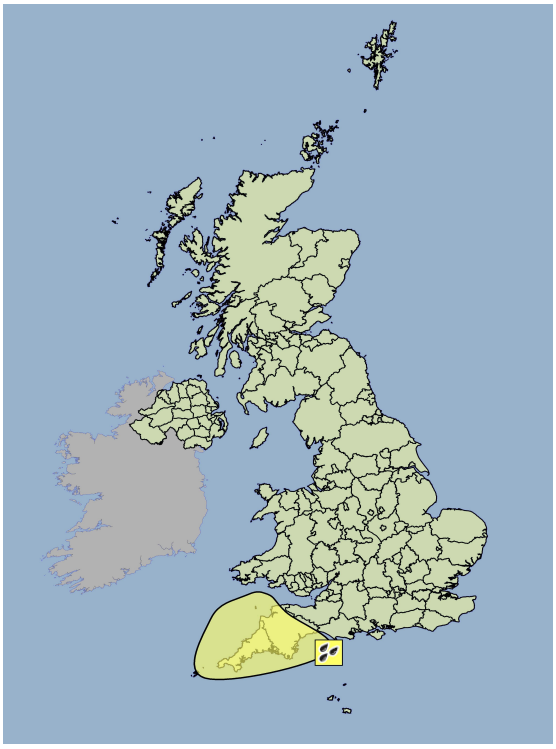
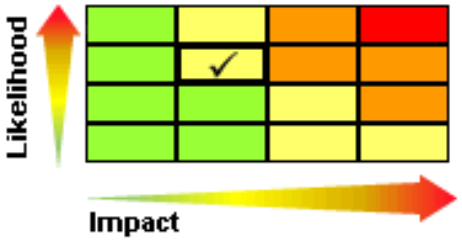
National Severe Weather Warning Service





Chief Forecasters Assessment
Following heavy rain in the west of the area on Saturday morning, thundery showers are expected to extend north from France to affect the east of the area this evening. The rain will then become more persistent and often heavy overnight and during Sunday morning, as an area of low pressure develops and causes the frontal band to pivot close to southwest England.

Some parts of the warning area could receive 30-60 mm of rain through the period, which will include some localised downpours which could produce 15-20 mm within an hour.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **19:00 on Sat, 22nd Aug 2015** until **13:00 on Sun, 23rd Aug 2015**

Heavy showers and thunderstorms may affect eastern parts of the warning area during Saturday evening. Then more persistent and at times heavy rain will develop across the area overnight and at times during Sunday, clearing northwards during the early afternoon.

The public should be aware that flooding may result from either short-period intense rainfall this evening, or more persistent heavy rain thereafter. This warning may be updated as further information becomes available.
